(a) Pretraining
Four nested label sets, one pretraining each
188 classes
162 classes
43 classes
17 classes
features
512
One network
same initial weights
same jets
QCD
QCD
QCD
Each merge removes:
QCD quark content
flavor beyond the heaviest quark, s vs u, d, quark counts, gluon vs quark, e vs μ
b, c, light
(b) Use
frozen
Train a linear layer
Frozen features, linear probe
512
trained
Train all weights
Fine-tuning
