

Pretraining vocabulary granularity governs transfer, in-domain and under domain shift

shaded orange: at $N = 10^4$ the scratch curve alone runs at LR $5e-4$ vs $1e-4$ pretrained — that contrast is confounded; 162-class vs 17-class is not

in-domain
JetClass-II, 162-way

domain shift
JetClass-I, 10-class
